

- Time ranges: 0.1 s to 10 h
- 2 contact functions: - DPDT delay on operate
- One instantaneous, one delayed
- Easy time and function setting
- Knob-adjustable time setting
- Automatic start functions
- Repeatability: $\leq 0.2 \%$
- Output: $2 \times 5$ A SPDT relay
- Plug-in module, S-housing
- LED-indication for relay and power supply ON
- 24 VAC/DC and 115 to 230 VAC power supply
- Cadmium-free contacts
- Timer in accordance with IEC 61812-1

## Product Description

Multi-voltage delay on operate timer with 6 selectable time ranges from 0.1 s up to 10 h for standard 11-pin circular sockets. Can be configured
with one instantaneous output contact, which can be used in applications where an output is desired immediately when power supply is applied.

## Wiring Diagram

## Function and Time Setting

## Operation Diagram

## Mode of Operation

Functions selectable by DIP-switch

Contact function 1
DPDT delay on operate The delay period begins when power supply is applied. At the end of the set delay, both relay contacts will operate and will not release until power supply is interrupted. If power supply is interrupted for at least 200 ms before the relay operates, the time circuit is reset to zero and the relay is ready for a new time period.

Contact function 2 One instantaneous, one delayed
Relay contact 2 operates instantaneously when power supply is applied. After expiration of the set delay, relay contact 1 operates.

Both contacts remain in ONposition until power supply is interrupted. After 200 ms the time relay is ready for renewed start.
